[ABOUT]

Electronic and Computer Engineering diploma graduate and incoming NTU Electrical & Electronic Engineering undergraduate, seeking to serve as a Senior Digital and Intelligence Systems Engineer, building and sustaining the communication and sensor systems that support SAF operations. Driven and quick to take on responsibility, promoted from intern to Assistant Automation Engineer within 5 months at Innovave Tech, delivering 7 projects across the system lifecycle, from integration and on-site validation to fault diagnosis and customer handover. Hardworking and disciplined, holding part-time jobs continuously for nearly 4 years while studying full-time, and ready to mentor others, having trained new crew in a front-of-house role.

◆ EXPERIENCE

INNOWAVE TECH

Assistant Automation Engineer

February 2026 – April 2026

- Modified and commissioned semiconductor wafer probers for automated wafer loading, integrating with a third-party autonomous mobile robot (AMR).
- Diagnosed and resolved mechanical, electrical and communication faults on customer equipment during on-site deployments.
- Ran commissioning, testing and user acceptance testing through to project closure before customer handover.

Automation Engineer Intern

September 2025 – February 2026

- Contributed to 7 engineering projects in 8 months within a team of 6, spanning equipment automation, remote equipment control and IoT.
- Designed an external mounting bracket in Fusion 360 to correct a door levelling fault; installed and tested with no faults recurring.
- Tested and validated an IoT demonstration system on site independently, operating a AIKVM setup connected to in-house control software.
- Conducted proof-of-concept testing across multiple prober models using a logic analyser and port recorder to compare communication interface signals.

TROOPERS

Event Crew (deployed at IMBA, Gardens by the Bay)

May 2026 – Aug 2026

- Served up to 80+ guests per shift across ticketing, entry scanning and gallery duties for four immersive art exhibitions.
- Trained a new crew member on ticketing and entry procedures; rotated across all 5 crew stations and resolved guest complaints directly.

FOODPANDA

Food Delivery Rider

April 2025 – September 2026

- Completed food and grocery deliveries across Singapore over 18 months while studying full-time and holding a second part-time role.

KENTUCKY FRIED CHICKEN

Crew Member

November 2022 – July 2025

- Worked cashier and cook/base stations across 2 years 9 months while studying full-time, rotating to cover short-staffed shifts.

◆ EDUCATION

Bachelor of Engineering in Electrical & Electronic Engineering

Nanyang Technological University (NTU) · 2028

Diploma in Electronic and Computer Engineering

Nanyang Polytechnic · 2023 – 2026 · GPA 3.42/4.0

GCE O Levels

Serangoon Garden Secondary School · 2019 – 2022

◆ TECHNICAL SKILLS

PROGRAMMING	C, C++, Python, C#
EMBEDDED	ESP32, Raspberry Pi, BeagleBone, UART, I ² C, SPI, GPIO, ADC, PWM, timers, interrupts
HARDWARE	Breadboarding, soldering, schematic capture and reading, PCB design, KiCad, Eagle, LTSpice
WEB DEV	JavaScript, HTML/CSS, Flask, Socket.IO, REST APIs, WebSockets, SQLite

◆ PROJECTS

MediBook

Jul 2025 – Sep 2025

Used: Flutter, Firebase

- Built a mobile healthcare app integrating clinic booking, a medicine store, nutrition lookup and an AI chatbot, with real-time Firestore for appointments and orders.
- Integrated Geoapify, RapidAPI, CalorieNinjas and Google Gemini; implemented map-based clinic search with time validation and atomic batch checkout.

Smart Bus Stop

Apr 2024 – Aug 2024

Used: BeagleBone, Flask, Socket.IO, Python

- Built a solar-powered IoT bus stop simulation on BeagleBone, managing environmental sensors and powered add-ons such as fans.
- Delivered a real-time web dashboard over Flask and Socket.IO for live monitoring and control; coordinated task distribution and backend integration across the team.
